Lecture: Lexical Semantics

CS 585, Fall 2017
Introduction to Natural Language Processing
http://people.cs.umass.edu/~brenocon/inlp2017

Brendan O’Connor
College of Information and Computer Sciences
University of Massachusetts Amherst

[most slides borrowed from J&M 3rd ed. website]
• Word sparsity is a problem!
  • Show me tweets about voting irregularities
  • Train a classifier on 50 documents
• Idea: external database of word meaning information, for word types.
  • Today: word senses and taxonomies
  • Thursday: sentiment lexicons and lexicon expansion
  • Post-midterm: vectors, word embeddings, distributional semantics
Terminology: lemma and wordform

- A **lemma** or **citation form**
  - Same stem, part of speech, rough semantics

- A **wordform**
  - The inflected word as it appears in text

<table>
<thead>
<tr>
<th>Wordform</th>
<th>Lemma</th>

Lemmas have senses
Lemmas have senses

• One lemma “bank” can have many meanings:
  • ...a bank can hold the investments in a custodial account...
  • “...as agriculture burgeons on the east bank the river will shrink even more”

• Sense (or word sense)
  • A discrete representation of an aspect of a word’s meaning.

• The lemma bank here has two senses
Lemmas have senses

- One lemma "bank" can have many meanings:
  
  Sense 1:
  
  • ...a bank can hold the investments in a custodial account...
  
  • "...as agriculture burgeons on the east bank the river will shrink even more"

- **Sense (or word sense)**
  
  • A discrete representation of an aspect of a word’s meaning.

- The lemma **bank** here has two senses
Lemmas have senses

• One lemma “bank” can have many meanings:

  Sense 1: • …a **bank** can hold the investments in a custodial account…

  Sense 2: • “…as agriculture burgeons on the east **bank** the river will shrink even more”

• **Sense (or word sense)**
  • A discrete representation of an aspect of a word’s meaning.

• The lemma **bank** here has two senses
Homonymy

**Homonyms**: words that share a form but have unrelated, distinct meanings:

- \( \text{bank}_1 \): financial institution, \( \text{bank}_2 \): sloping land
- \( \text{bat}_1 \): club for hitting a ball, \( \text{bat}_2 \): nocturnal flying mammal

1. Homographs (\( \text{bank}/\text{bank}, \text{bat}/\text{bat} \))

2. Homophones:
   1. Write and right
   2. Piece and peace
Homonymy causes problems for NLP applications

- Information retrieval
  - “bat care”
- Machine Translation
  - bat: murciélago (animal) or bate (for baseball)
- Text-to-Speech
  - bass (stringed instrument) vs. bass (fish)
Polysemy

- 1. The **bank** was constructed in 1875 out of local red brick.
- 2. I withdrew the money from the **bank**
- Are those the same sense?
  - Sense 2: “A financial institution”
  - Sense 1: “The building belonging to a financial institution”
- A **polysemous** word has **related** meanings
  - Most non-rare words have multiple meanings
Metonymy or Systematic Polysemy: A systematic relationship between senses

- Lots of types of polysemy are systematic
  - School, university, hospital
  - All can mean the institution or the building.

- A systematic relationship:
  - Building ↔ Organization

- Other such kinds of systematic polysemy:
  - **Author** (Jane Austen wrote Emma)
  - **Works of Author** (I love Jane Austen)
Metonymy or Systematic Polysemy:
A systematic relationship between senses

- Lots of types of polysemy are systematic
  - School, university, hospital
  - All can mean the institution or the building.
- A systematic relationship:
  - Building ↔ Organization
- Other such kinds of systematic polysemy:
  - **Author** *(Jane Austen wrote Emma)*
  - **Works of Author** *(I love Jane Austen)*
  - **Tree** *(Plums have beautiful blossoms)*
Metonymy or Systematic Polysemy: A systematic relationship between senses

- Lots of types of polysemy are systematic
  - School, university, hospital
  - All can mean the institution or the building.
- A systematic relationship:
  - Building ↔ Organization
- Other such kinds of systematic polysemy:
  - Author (Jane Austen wrote Emma) ↔ Works of Author (I love Jane Austen)
  - Tree (Plums have beautiful blossoms) ↔ Fruit (I ate a preserved plum)
How do we know when a word has more than one sense?
How do we know when a word has more than one sense?

• The “zeugma” test: Two senses of serve?
  • Which flights serve breakfast?
  • Does Lufthansa serve Philadelphia?
  • Does Lufthansa serve breakfast and San Jose?
How do we know when a word has more than one sense?

• The “zeugma” test: Two senses of serve?
  • Which flights serve breakfast?
  • Does Lufthansa serve Philadelphia?
  • Does Lufthansa serve breakfast and San Jose?

• Since this conjunction sounds weird,
  • we say that these are two different senses of “serve”
Word meaning relations

• Relationships between pairs of word meanings
• Synonymy: same meaning
• Antonymy: opposite meanings
• Hypernymy/hyponymy: more general/specific meanings
• Meronymy: part-whole relations
• etc.
Synonyms

• Word that have the same meaning in some or all contexts.
  • filbert / hazelnut
  • couch / sofa
  • big / large
  • automobile / car
  • vomit / throw up
  • Water / H₂O

• Two lexemes are synonyms
  • if they can be substituted for each other in all situations
  • If so they have the same *propositional meaning*
Synonyms
Synonyms

- But there are few (or no) examples of perfect synonymy.
  - Even if many aspects of meaning are identical
  - Still may not preserve the acceptability based on notions of politeness, slang, register, genre, etc.
Synonyms

- But there are few (or no) examples of perfect synonymy.
  - Even if many aspects of meaning are identical
  - Still may not preserve the acceptability based on notions of politeness, slang, register, genre, etc.

- Example:
  - Water/H$_2$O
  - Big/large
  - Brave/courageous
Synonymy is a relation between senses rather than words
Synonymy is a relation between senses rather than words

- Consider the words *big* and *large*
Synonymy is a relation between senses rather than words

- Consider the words *big* and *large*
- Are they synonyms?
  - How *big* is that plane?
  - Would I be flying on a *large* or small plane?
Synonymy is a relation between senses rather than words

- Consider the words *big* and *large*
- Are they synonyms?
  - How *big* is that plane?
  - Would I be flying on a *large* or small plane?
- How about here:
  - Miss Nelson became a kind of *big* sister to Benjamin.
  - Miss Nelson became a kind of *large* sister to Benjamin.
Synonymy is a relation between senses rather than words

- Consider the words *big* and *large*
- Are they synonyms?
  - How *big* is that plane?
  - Would I be flying on a *large* or small plane?
- How about here:
  - Miss Nelson became a kind of *big* sister to Benjamin.
  - Miss Nelson became a kind of *large* sister to Benjamin.
- Why?
  - *big* has a sense that means being older, or grown up
  - *large* lacks this sense
Antonyms

• Senses that are opposites with respect to one feature of meaning
• Otherwise, they are very similar!
  dark/light  short/long  fast/slow  rise/fall
  hot/cold    up/down    in/out
• More formally: antonyms can
  • define a binary opposition
    or be at opposite ends of a scale
    • long/short, fast/slow
  • be reversives:
    • rise/fall, up/down
Hyponymy and Hypernymy

- One sense is a **hyponym** of another if the first sense is more specific, denoting a subclass of the other
  - car is a hyponym of *vehicle*
  - *mango* is a hyponym of *fruit*
- Conversely **hypernym/superordinate** ("hyper is super")
  - *vehicle* is a hypernym of *car*
  - *fruit* is a hypernym of *mango*

<table>
<thead>
<tr>
<th>Superordinate/hyper</th>
<th>vehicle</th>
<th>fruit</th>
<th>furniture</th>
</tr>
</thead>
<tbody>
<tr>
<td>Subordinate/hyponym</td>
<td>car</td>
<td>mango</td>
<td>chair</td>
</tr>
</tbody>
</table>
Hyponymy more formally

• Extensional:
  • The class denoted by the superordinate extensionally includes the class denoted by the hyponym

• Entailment:
  • A sense A is a hyponym of sense B if being an A entails being a B

• Hyponymy is usually transitive
  • (A hypo B and B hypo C entails A hypo C)

• Another name: the IS-A hierarchy
  • A IS-A B (or A ISA B)
  • B subsumes A
Hyponyms and Instances

- WordNet has both **classes** and **instances**.
- An **instance** is an individual, a proper noun that is a unique entity
  - San Francisco is an **instance** of city
- But city is a class
  - city is a **hyponym** of municipality...location...
Meronymy

• The part-whole relation
  • A leg is part of a chair; a wheel is part of a car.
• Wheel is a meronym of car, and car is a holonym of wheel.
Computing with a Thesaurus

WordNet
WordNet 3.0

- A hierarchically organized lexical database
- On-line thesaurus + aspects of a dictionary
  - Some other languages available or under development
    - (Arabic, Finnish, German, Portuguese...)

Senses of “bass” in Wordnet

Noun

- **S: (n) bass** (the lowest part of the musical range)
- **S: (n) bass, bass part** (the lowest part in polyphonic music)
- **S: (n) bass, basso** (an adult male singer with the lowest voice)
- **S: (n) sea bass, bass** (the lean flesh of a saltwater fish of the family Serranidae)
- **S: (n) freshwater bass, bass** (any of various North American freshwater fish with lean flesh (especially of the genus Micropterus))
- **S: (n) bass, bass voice, basso** (the lowest adult male singing voice)
- **S: (n) bass** (the member with the lowest range of a family of musical instruments)
- **S: (n) bass** (nontechnical name for any of numerous edible marine and freshwater spiny–finned fishes)

Adjective

- **S: (adj) bass, deep** (having or denoting a low vocal or instrumental range) “a deep voice”; "a bass voice is lower than a baritone voice"; "a bass clarinet"
How is “sense” defined in WordNet?

- The **synset** (**synonym set**), the set of near-synonyms, instantiates a sense or concept, with a **gloss**.
- Example: **chump** as a noun with the **gloss**:
  “a person who is gullible and easy to take advantage of”
- This sense of “chump” is shared by 9 words:
  chump$^1$, fool$^2$, gull$^1$, mark$^9$, patsy$^1$, fall guy$^1$, sucker$^1$, soft touch$^1$, mug$^2$
- Each of these senses have this same gloss
  - (Not every sense; sense 2 of gull is the aquatic bird)
WordNet Hypernym Hierarchy for “bass”

- **S**: (n) **bass**, **basso** (an adult male singer with the lowest voice)
  - direct hypernym / inherited hypernym / sister term
    - **S**: (n) **singer**, **vocalist**, **vocalizer**, **vocaliser** (a person who sings)
    - **S**: (n) **musician**, **instrumentalist**, **player** (someone who plays a musical instrument (as a profession))
      - **S**: (n) **performer**, **performing artist** (an entertainer who performs a dramatic or musical work for an audience)
      - **S**: (n) **entertainer** (a person who tries to please or amuse)
    - **S**: (n) **person**, **individual**, **someone**, **somebody**, **mortal**, **soul** (a human being) "there was too much for one person to do"
    - **S**: (n) **organism**, **being** (a living thing that has (or can develop) the ability to act or function independently)
      - **S**: (n) **living thing**, **animate thing** (a living (or once living) entity)
        - **S**: (n) **whole**, **unit** (an assemblage of parts that is regarded as a single entity) "how big is that part compared to the whole?"; "the team is a unit"
        - **S**: (n) **object**, **physical object** (a tangible and visible entity; an entity that can cast a shadow) "it was full of rackets, balls and other objects"
        - **S**: (n) **physical entity** (an entity that has physical existence)
          - **S**: (n) **entity** (that which is perceived or known or inferred to have its own distinct existence (living or nonliving))
WordNet: Viewed as a graph
Hyponyms of “person” in WN
7588 total -- with most freq. sense restriction. [from Michael Heilman]

- vintager
- matrisib
- horseback rider
- ceo
- seeker
- fieldhand
- radiologist
- captain
- moujik
- research director
- damsel
- nibbler

Supersenses

• A word’s supersense can be a useful coarse-grained representation of word meaning for NLP tasks

I googled communication restaurants GROUP in the area LOCATION and Fuji_Sushi GROUP came up communication and reviews COMMUNICATION were stative great so I made a carry out possession order communication

• See “STREUSEL” system
  http://www.cs.cmu.edu/~ark/LexSem/
To use WordNet, or any lexical database, for NLP:

1. Word Sense Disambiguation (WSD) a.k.a. Entity Linking
   - The \([\text{bank}]_3\) was open early.

2. Use lexical entry information for features or inferences
   - When was that business open?
   - \([\text{bank}]_3 \leftarrow \text{hypo- [commercial institution]}\)
WordNet 3.0

• Where it is:
  • http://wordnetweb.princeton.edu/perl/webwn

• Libraries
  • Python: WordNet from NLTK
  • Java: JWNL, extJWNL
MeSH: Medical Subject Headings
thesaurus from the National Library of Medicine

- MeSH (Medical Subject Headings)
  - 177,000 entry terms that correspond to 26,142 biomedical “headings”

- Hemoglobins
  
  **Entry Terms:** Eryhem, Ferrous Hemoglobin, Hemoglobin

  **Definition:** The oxygen-carrying proteins of ERYTHROCYTES. They are found in all vertebrates and some invertebrates. The number of globin subunits in the hemoglobin quaternary structure differs between species. Structures range from monomeric to a variety of multimeric arrangements
MeSH: Medical Subject Headings
thesaurus from the National Library of Medicine

  • 177,000 entry terms that correspond to 26,142 biomedical “headings”

• Hemoglobins

  **Entry Terms:** Eryhem, Ferrous Hemoglobin, Hemoglobin

  **Definition:** The oxygen-carrying proteins of ERYTHROCYTES. They are found in all vertebrates and some invertebrates. The number of globin subunits in the hemoglobin quaternary structure differs between species. Structures range from monomeric to a variety of multimeric arrangements.
The MeSH Hierarchy

1. + Anatomy [A]
2. + Organisms [B]
3. + Diseases [C]
4. + Chemicals and Drugs [D]
5. + Analytical, Diagnostic and Therapeutic Techniques and Equipment [E]
6. + Psychiatry and Psychology [F]
7. + Phenomena and Processes [G]
8. + Disciplines and Occupations [H]
9. + Anthropology, Education, Sociology and Social Phenomena [I]
10. + Technology, Industry, Agriculture [J]
11. + Humanities [K]
12. + Information Science [L]
13. + Named Groups [M]
14. + Health Care [N]
15. + Publication Characteristics [V]
16. + Geographicals [Z]
The MeSH Hierarchy

1. + Anatomy [A]
2. + Organisms [B]
3. + Diseases [C]
4. - Chemicals and Drugs [D]
   - Inorganic Chemicals [D01] +
   - Organic Chemicals [D02] +
   - Heterocyclic Compounds [D03] +
   - Polycyclic Compounds [D04] +
   - Macromolecular Substances [D05] +
   - Hormones, Hormone Substitutes, and Hormone Antagonists [D06] +
   - Enzymes and Coenzymes [D08] +
   - Carbohydrates [D09] +
   - Lipids [D10] +
   - Amino Acids, Peptides, and Proteins [D12] +
   - Nucleic Acids, Nucleotides, and Nucleosides [D13] +
   - Complex Mixtures [D20] +
   - Biological Factors [D23] +
   - Biomedical and Dental Materials [D25] +
   - Pharmaceutical Preparations [D26] +
The MeSH Hierarchy

1. + Anatomy [A]
2. + Organisms [B]
3. + Diseases [C]
4. - Chemicals and Drugs [D]
   - Inorganic Chemicals [D01] +
   - Organic Chemicals [D02] +
   - Heterocyclic Compounds [D03] +
   - Polycyclic Compounds [D04] +
   - Macromolecular Substances [D05] +
   - Hormones, Hormone Substitutes, and Related Substances [D06] +
   - Enzymes and Coenzymes [D08] +
   - Carbohydrates [D09] +
   - Lipids [D10] +
   - Amino Acids, Peptides, and Proteins [D11]
   - Nucleic Acids, Nucleotides, and Nucl
   - Complex Mixtures [D20] +
   - Biological Factors [D23] +
   - Biomedical and Dental Materials [D25] +
   - Pharmaceutical Preparations [D26] +

Amino Acids, Peptides, and Proteins [D12]

Proteins [D12.776]

Blood Proteins [D12.776.124]
   - Acute-Phase Proteins [D12.776.124.050] +
   - Anion Exchange Protein 1, Erythrocyte [D12.776.124.078]
   - Ankyrins [D12.776.124.080]
   - beta 2-Glycoprotein I [D12.776.124.117]
   - Blood Coagulation Factors [D12.776.124.125] +
   - Cholesterol Ester Transfer Proteins [D12.776.124.197]
   - Fibrin [D12.776.124.270] +
   - Glycophorin [D12.776.124.300]
   - Hemocyanin [D12.776.124.337]
   - Hemoglobins [D12.776.124.400]
   - Carboxyhemoglobin [D12.776.124.400.141]
   - Erythrocrucorsins [D12.776.124.400.220]
Uses of the MeSH Ontology

• Provide synonyms ("entry terms")
  • E.g., glucose and dextrose

• Provide hypernyms (from the hierarchy)
  • E.g., glucose ISA monosaccharide

• Indexing in MEDLINE/PubMED database
  • NLM’s bibliographic database:
    • 20 million journal articles
    • Each article hand-assigned 10-20 MeSH terms
Entity-focused lexical databases

- General-domain, derived from Wikipedia
  - DBpedia http://wiki.dbpedia.org/
  - Freebase: now discontinued
- Google Knowledge Graph and other proprietary databases (Bing, Facebook, etc.)
  - Lots of relations/attributes, aimed for consumer internet use
  - Can be used directly to answer queries
  - Internally, they entity-link document texts against them
Word Similarity

- **Synonymy**: a binary relation
  - Two words are either synonymous or not
- **Similarity (or distance)**: a looser metric
  - Two words are more similar if they share more features of meaning
- Similarity is properly a relation between **senses**
  - The word “bank” is not similar to the word “slope”
  - Bank$^1$ is similar to fund$^3$
  - Bank$^2$ is similar to slope$^5$
- But we’ll compute similarity over both words and senses
Why word similarity

• A practical component in lots of NLP tasks
  • Question answering
  • Natural language generation
  • Automatic essay grading
  • Plagiarism detection

• A theoretical component in many linguistic and cognitive tasks
  • Historical semantics
  • Models of human word learning
  • Morphology and grammar induction
Word similarity and word relatedness

- We often distinguish **word similarity** from **word relatedness**
  - **Similar words**: near-synonyms
  - **Related words**: can be related any way
    - car, bicycle: *similar*
    - car, gasoline: *related*, not similar
Two classes of similarity algorithms

- Thesaurus-based algorithms
  - Are words “nearby” in hypernym hierarchy?
  - Do words have similar glosses (definitions)?

- Distributional algorithms
  - Do words have similar distributional contexts?
  - Distributional (Vector) semantics on Thursday!
Path based similarity

- Two concepts (senses/synsets) are similar if they are near each other in the thesaurus hierarchy
  - =have a short path between them
  - concepts have path 1 to themselves
Evaluating similarity

- **Extrinsic (task-based, end-to-end) Evaluation:**
  - Question Answering
  - Spell Checking
  - Essay grading

- **Intrinsic Evaluation:**
  - Correlation between algorithm and human word similarity ratings
  - Wordsim353: 353 noun pairs rated 0-10. \( \text{sim}(\text{plane}, \text{car}) = 5.77 \)
  - Taking TOEFL multiple-choice vocabulary tests
    - **Levied** is closest in meaning to: imposed, believed, requested, correlated
