# Event Map

Alexander Filipek
Chi Oh

Vision

- **Google map focused on events throughout campus. Locate user using GPS and show nearby public or private events with status indicators.**
- **This is designed for students and faculty of a college campus to plan and attend events in an easy to use manner.**
- **Events may be clubs, meetings, talks, parties, shows, performances, presentations, etc.**
- **Users can add or search for events.**
- **Users may create and invite other users into groups for private events.**
- **Focus is on campus setting, but product could be extended for towns and cities.**

Software Architecture

Challenges and Risks

- Implementing Google Maps API along with the event and user database
- Creating a simple to use design interface, which is both user friendly and looks good
