What is Software Engineering?

More than just writing code

The complete process of specifying, designing, developing, analyzing, deploying, and maintaining a software system.

- Common Software Engineering tasks include:
 - Requirements engineering
 - Specification writing and documentation
 - Software architecture and design
 - Programming
 - Software testing and debuggingRefactoring

What is Software Engineering?

More than just writing code

The complete process of specifying, designing, developing, analyzing, deploying, and maintaining a software system.

- Common Software Engineering tasks include:
 - Requirements engineering
 - Specification writing and documentation
 - Software architecture and design
 Programming
 - Programming
 Software testing and debugging
 - Refactoring

What is Software Engineering?

More than just writing code

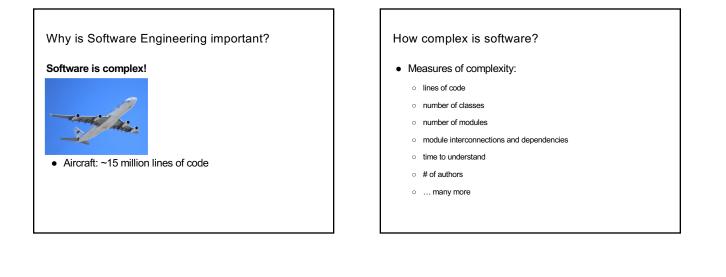

The complete process of specifying, designing, developing, analyzing, deploying, and maintaining a software system.

- Common Software Engineering tasks include:
 - Requirements engineering
 - Specification writing and documentation
 - Software architecture and design
 - Programming
 - Software testing and debugging
 - Refactoring
 - Why is Software Engineering important?

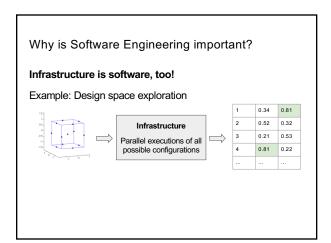

How complex is software?

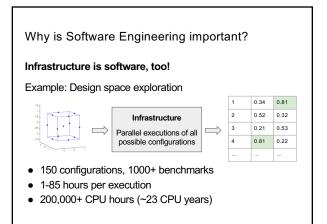

- Measures of complexity:
 - lines of code
- Windows Server 2003: 50 MSLoC Debian 5.0: 324 MSLoC
- number of classesnumber of modules
- module interconnections and dependencies
- time to understand
- # of authors
- ... many more

How big is 324 MSLoC?

- 50 lines/page \Rightarrow 6.5M pages
- 1K pages/ream \Rightarrow 6.5K reams
- 2 inches/ream \Rightarrow 13K inches
- 13K inches \approx four times the height of the CS building
- 5 words/LoC @ 50 wpm \Rightarrow 32M min \approx 61 years

And we don't just want random words, we want compiling code!

Summary: Software Engineering

What is Software Engineering?

The complete process of specifying, designing, developing, analyzing, deploying, and maintaining a software system.

Why is it important?

- Software is everywhere and complex.
- Software defects are expensive (and annoying).

Goals

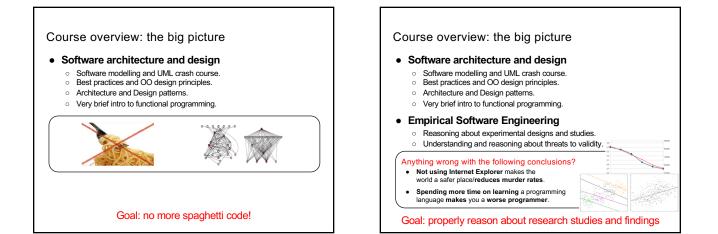

- Decompose a complex engineering problem.
- Organize processes and effort.
- Improve software reliability.
- Improve developer productivity.

Your expectations

Introduction and a brief (5 minute) survey

- Why are you taking this course?
- What do you expect from this course?
- What are your learning goals (theory and practice)?

Course overview: the big picture Software architecture and design Software modelling and UML crash course. Best practices and OO design principles. Architecture and Design patterns. Very brief intro to functional programming. Empirical Software Engineering Reasoning about experimental designs and studies. Understanding and reasoning about threats to validity. Software testing, debugging, and repair Learning about cutting-edge research. Hands-on experience, using testing and debugging techniques. Design, development, and testing of a research prototype, etc.

Course overview: rough timeline

September

Software architecture and design

October

- Empirical Software Engineering
- Software testing
- Class project

November

- Software debugging and repair
- Collaboration and teamwork
- Class project

December

- Reasoning about programs
- Class project

Exposure to cutting-edge research

- We will have 4 guest lectures on research
 - These will be held out of class, most likely at 4PM.
 Videos will be available.
- We might have 1 guest lecture on what it's like to work in industry.

Course overview: grading

Grading

- 30% Class project
- 40% In-class exercises
- 20% Homework and paper reviews
- 10% Participation

Our expectations

- Programming experience.
- Familiarity with an OO programming language (e.g., Java, C++, etc.)
- Reading and reviewing 2 research papers.
- Active participation in discussions and group work.

Logistics

- Marston Hall 132, Tuesday and Thursday, 10 AM 11:15 AM
- Lectures, tutorials, and in-class exercises.
- Course material, policies, and schedule on web site: <u>http://people.cs.umass.edu/~brun/class/CS520/</u>
- Submission of assignments via Moodle:
 https://moodle.umass.edu
